

A woman with long, wavy brown hair is walking on a runway. She is wearing a vibrant orange, spaghetti-strap dress with a deep V-neckline and a large, draped bow at the waist. The dress has a full, ruffled skirt. She is looking directly at the camera with a slight smile. The background is blurred, showing a crowd of people and bright stage lights. The entire image is framed within a large, light gray oval.

KERATIN

Keratin is one of the main components of the hair fiber, accounting for between 65% and 96%. Specifically, it is a crucial protein for hair, making it highly resistant. Keratin not only gives hair strength but also elasticity. This latter property makes styling possible. Keratins possess a certain plasticity: when exposed to heat and humidity, they can assume a different shape from their natural one; the “new look” lasts for a limited time before returning to its original form. Finally, keratin makes hair waterproof.

CERAMIDE

Ceramides are naturally found in hair and play an important role: specifically, they act as a unifier of the hair cuticle and cortex, helping it regain structure and balance after environmental stresses caused by sun, wind, humidity, and harsh or mild chemical products suited to your hair type. A ceramide-based shampoo and conditioner can help keep your hair healthy, shiny, and protected.

PIGMENTS

99.9% Purity - Performance and Durability.

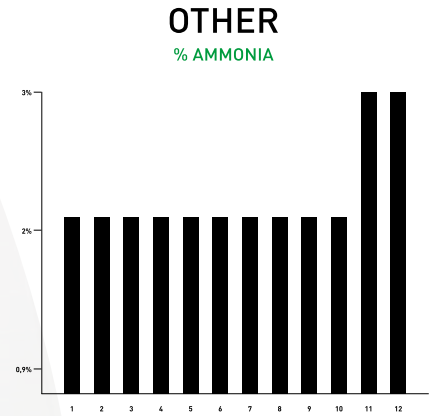

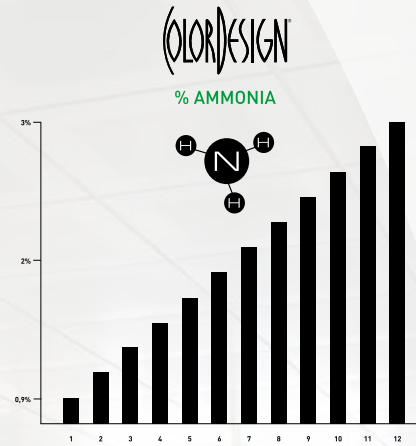

Our laboratory inspects all incoming raw materials using IR spectrophotometers, accepting only components with a purity percentage greater than 99.9%. Using such pure pigments translates into less dye waste at the production level, optimizing the final color.

BALANCED ALKALINITY

99.9% Purity - Performance and Durability.

Our laboratory inspects all incoming raw materials using IR spectrophotometers, accepting only components with a purity greater than 99.9%. Using such pure pigments translates into less dye waste during production, optimizing the final color.

QUALITY CONTROL

In addition to carefully monitoring incoming raw materials, our laboratory monitors all batches produced to ensure product chemical and physical standards are met.

- Strand testing: All products are tested on a strand of human hair to determine their performance. This strand is checked using a spectrophotometer and compared with the existing database.
- pH: The product's pH is checked to determine its alkalinity.
- Ammonia content: Coloredesign products are tested using state-of-the-art automatic titrators to determine their actual ammonia content.
- Viscosity: We verify that all our products comply with viscosity ranges to ensure perfect mixing with the oxygen and application to the hair.

STOICHIOMETRY

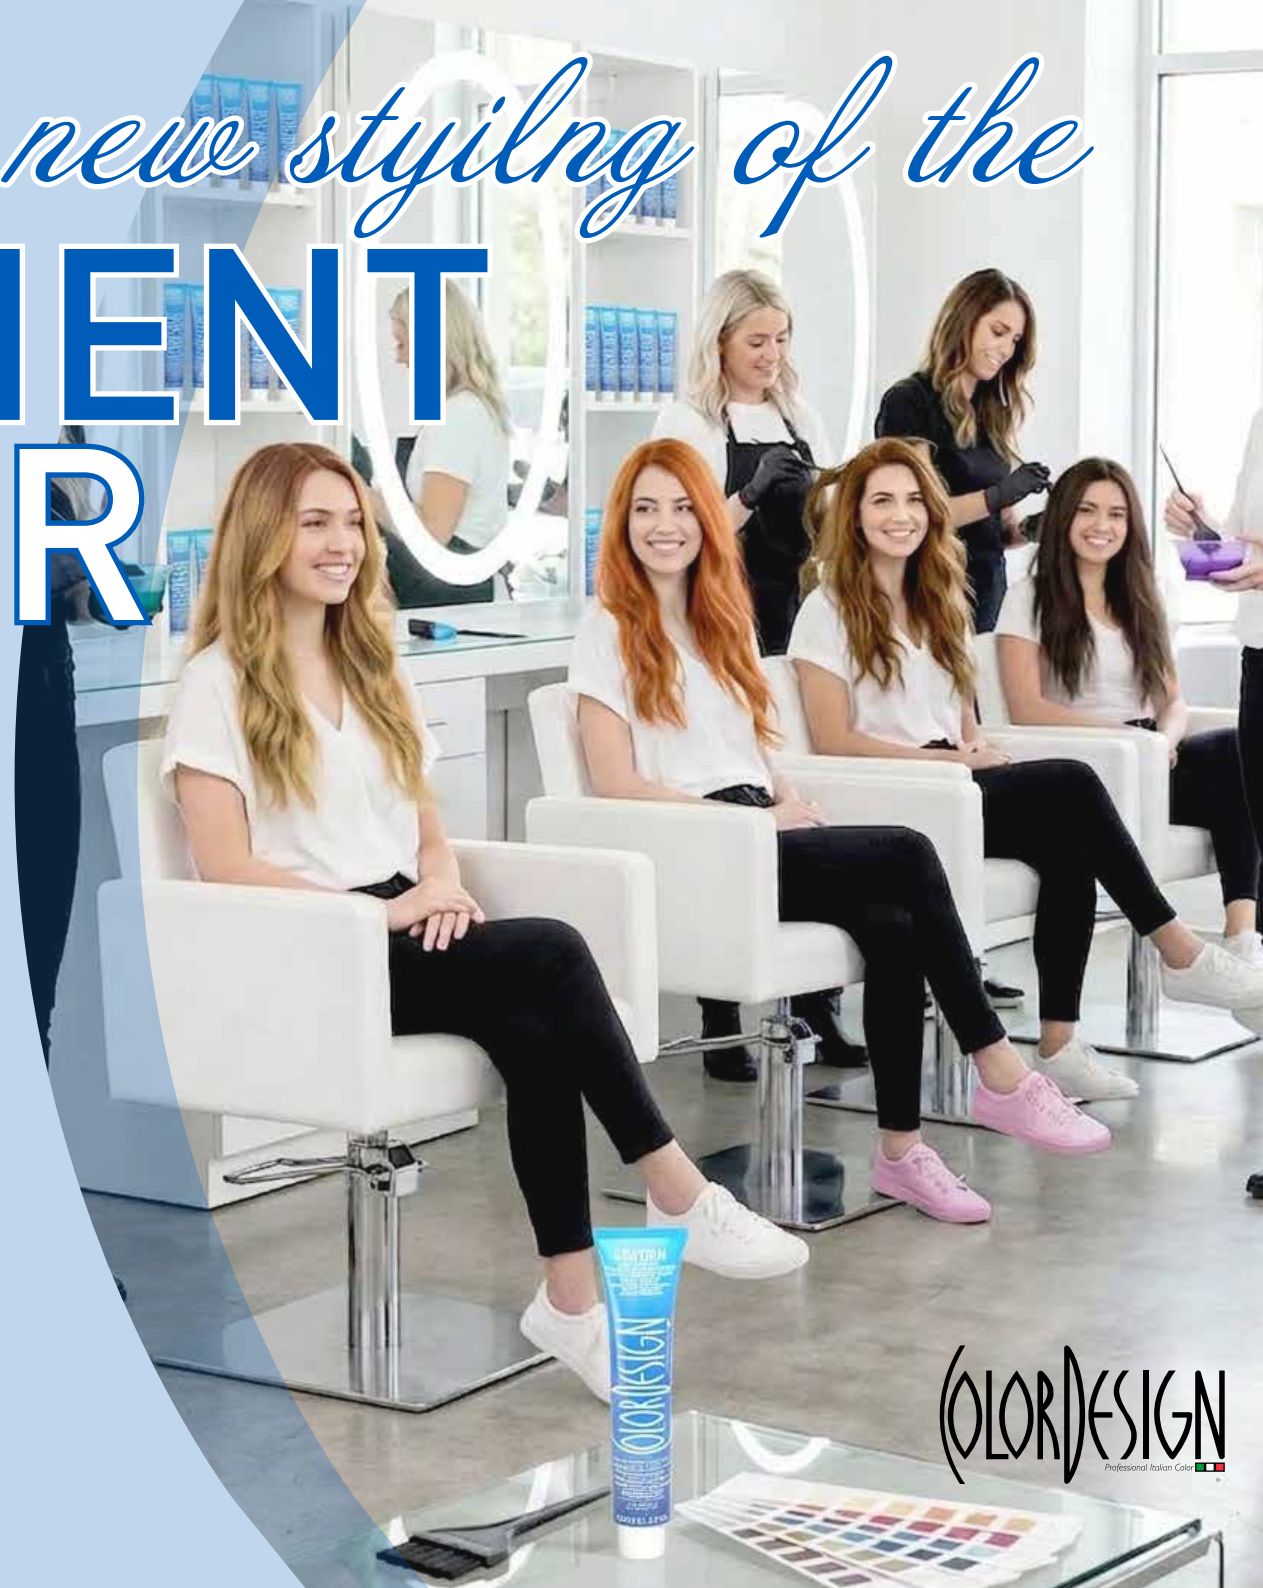

Colordesign formulations are created according to stoichiometric standards. Stoichiometry is the study of the quantitative relationships between reactants and products in a chemical reaction. When the colorant is mixed with the Oxidizing Cream, the oxygen it contains activates the reaction between the various pigments. These pigments, perfectly balanced at the molar level between primary and secondary, ensure a full reaction, increasing the stability and longevity of the color on the hair.

The elegant new styling of the **PERMANENT COLOR**

ColorDesign Permanent Color gives hair intense color with extraordinary shine.

It allows you to create sophisticated plays of light and shades to fully customize your coloring, always ensuring a natural result.

The fresh Eco-friendly styling of **AMMONIA FREE**

ColorDesign Ammonia-Free Permanent Color is a gentle hair dye, free of ammonia. Without damaging the hair fiber, during the oxidation phase, the pigments penetrate the deepest layer of the hair structure, promoting greater adhesion to the hair: the result is an explosion of bright and intense color, gentle on the health of the hair fiber.

PEROXIDES & ACTIVATORS

Hair color enhancers and activators with a pleasant, creamy consistency that doesn't run, highly professional quality, a pleasant scent, and the complete absence of colorants to ensure excellent color results. Guarantees color stability. Lightens easily and effectively while respecting the hair structure, suitable for all hair types. Available for sale in a customized 990 ml bottle.

ARTIC BLOND SHAMPOO

Suitable for gray, lightened, or bleached hair, it is formulated with purple pigment that reduces unwanted yellow tones on gray hair, light blonde hair, and highlights. Apply to wet hair, massage, leave on for 1 to 5 minutes, emulsify, and rinse. Repeat shampooing if necessary. Available in customized 1-liter or 250-ml bottles.

SHINY BLOND BLUE LIGHTENING CREAM

A gentle bleaching treatment for scalp and hair, ensuring a perfect, gentle bleaching experience with stunning results.

The high-quality Shiny Blond Bleaching Cream by ColorDesign adds shine and protects hair from dehydration caused by bleaching.

BLEACHING POWDER

(COLOR)DESIGN
Professional Italian Color

Ammonia-free bleaching powders allow you to perform lightening techniques on strands and bleach hair, achieving up to seven levels of lightening without damaging the keratin structure. The presence of cyclodextrins facilitates the transport of bleaching agents, thus allowing for better removal of melanin located within the hair. The pleasant scent and absence of ammonia create a pleasant working environment and limit alterations to the hair fiber.

ColorDesign Black Bleach Powder allows you to perform strand lightening and hair bleaching techniques, achieving up to eleven levels of lightening. The powder can be used on natural and color-treated hair.

PRODUCTS OF RECONSTRUCTION

Thanks to their natural extracts and precious oils, ColorDesign products not only restructure hair, restoring its natural strength and health and preventing damage and fragility due to stress and aging, but also protect it daily from harmful environmental factors, such as pollution, humidity, scorching sun, and winter cold. Furthermore, they act directly on the body of the curl, leaving it soft, supple, and shiny, for ultra-defined styling with a completely natural effect. Three high-quality products that, when used together, maximize the restructuring effect. The oil and mask are available in two different formats to facilitate retail sales.

INTENSIVE TREATMENT WITH HYALURONIC ACID

UNIQUE is an intensive regenerating serum designed to revitalize stressed and weakened hair.

Its advanced formula, enriched with low and high molecular weight hyaluronic acid, acts on multiple levels of the hair: it deeply hydrates, improves the hair shaft's elasticity, and creates a protective barrier against external agents.

Thanks to its light and rapidly absorbed texture, UNIQUE easily penetrates the hair fiber, leaving hair soft, shiny, and visibly healthier from the first application.

Ideal for those seeking a professional treatment at home, UNIQUE is the daily step that transforms your routine into a moment of authentic care and beauty.

DAILY MASK LEAVE-IN

THE SUPERBE is the multifunctional leave-in treatment that combines everything your hair (and more) needs in a single step.

Designed to deliver visible results from the first application, THE SUPERBE repairs dry and damaged hair, prevents split ends, and helps keep hair soft, strong, and shiny. Its lightweight and versatile formula acts as an effective heat protector, counteracting the effects of heat from blow dryers and straighteners, while controlling frizz and providing a natural shine that enhances every highlight.

Perfect for all hair types, THE SUPERBE easily detangles, adds body and volume to fine hair, and precisely defines even the most demanding curls.

But it doesn't end there: thanks to its instant conditioning and hydrating action, THE SUPERBE can also be used on the skin, leaving it soft, nourished, and delicately scented.

STYLING

Treatment

ColorDesign hairsprays are paraben-free, preventing hair from becoming overloaded and sticky, maintaining its natural lightness and silkiness. The product dries quickly, perfectly holds any hairstyle without drying out hair, and protects it from aggressive external factors. This cosmetic is suitable for all hair types.

The mousse is specifically designed to give wavy and curly hair an ultra-volume and lightweight style, protecting curls and keeping them soft, defined, and supple.
